Wire sensor networks promise an unprecedented fine-grained interface between the virtual and physical worlds. They are one of the most rapidly developing new information technologies, with applications in a wide range of fields including industrial process control, security and surveillance, environmental sensing, and structural health monitoring. This book is motivated by the urgent need to provide a comprehensive and organized survey of the field. Ideal for researchers and designers seeking to create new algorithms and protocols, and engineers implementing integrated solutions, it also contains many exercises and can be used by graduate students taking courses in Networks.
